Compact and rugged, the 1000-VA Model 1735 dc-to-ac inverter is designed to perform equally well in stationary and mobile applications. The inverter provides an isolated, regulated 120-Vac, frequency-stable 60-Hz quasi-sine-wave output and is available in 24, 48 and 130-Vdc input versions. The conservatively rated Model 1735 can operate continuously at maximum rated power over a -10°C to +50°C ambient temperature range. It is well suited for powering a variety of loads, from sensitive electronic equipment to small motors and nonlinear loads normally considered difficult for inverters.

The Model 1735 is available as a plain inverter or with built-in automatic load switchover features to permit operation in UPS or standby-power modes.

SPECIFICATIONS

Input Voltage and Current
The nominal input voltage, the input voltage range, the no-load input current and the full-load input current are shown in Table 1.

Output Voltage
120 Vac nominal, single phase

Frequency
60 Hz nominal. ±0.25 Hz maximum variation over the full range of load and input voltage changes. Temperature coefficient is ±0.02% maximum per °C.

Volt-Ampere Rating
1000 VA

Output Voltage Regulation
Approx. ±5%

Output Voltage Wave Shape
Three-level stepped approximation to a sine wave with peak, average and rms values approximating those of a sine wave.

Temperature Range
Operating: -10°C to +50°C
Storage: -40°C to +95°C

Front-Panel Controls and Indicators
A combination circuit breaker and ON/OFF switch is provided for input power. L and U versions include three LED status indicators.

Mechanical Description
Figure 1 provides overall dimensions. Weight is approximately 13 lbs. Mounting flange on base accepts eight #10 screws.

Standard Configurations
P VERSION: Adding the suffix P to the basic model designates a plain inverter, i.e. a unit with no internal inverter-to-line or line-to-inverter transfer switching provisions. (“Line” refers to commercial ac power.) This version does not have the three front-panel LED status indicators or alarm contacts.

U VERSION: Adding the suffix U to the basic model number designates the inverter-preferred UPS configuration.

In this configuration, the load power is normally provided by the inverter. However, if the inverter output is interrupted, an internal transfer switch automatically transfers the load from the inverter to commercial ac power. The transfer time between inverter and line is short (2 msec. typical) and such transfers are normally not detected by even highly sensitive loads. Upon restoration of inverter power, transfer back to inverter power automatically takes place within a few seconds. This version includes three front-panel LED status indicators and auxiliary Form C contacts for remote indication of alarm conditions.

L VERSION: Adding the suffix L to the basic model number designates a unit which is identical to the “U” version except that, in the “L” configuration, the load power is normally provided by the commercial ac line and the inverter operates in the standby mode. If commercial ac power is interrupted, an internal transfer switch automatically transfers the load to the inverter. Upon restoration of commercial ac power, there is a delay of approximately five seconds, the load is then transferred back to commercial ac power and the inverter again operates in the standby mode. Other features such as transfer speed, alarms, indicators, etc. are the same as in the “U” version.

Model Numbering Information
For ordering purposes the Model 1735 should be identified by an expanded model number consisting of four numbers followed by a letter suffix. In sequence, they designate:
- basic 1000 VA inverter type (1735)
- nominal input voltage (24, 48 or 130)
- nominal output voltage (120)
- output frequency (60)
- configuration (P, U or L version)
For example, the correct part number for a 48-volt input, inverter-preferred UPS configuration is Model 1735-48-120-60-U

OTHER WILMORE PRODUCTS
For information about other Wilmore dc-to-ac inverters or for information about other power-conditioning products such as switching power supplies, dc-to-dc converters, and uninterruptible power systems, please contact our sales department.
